**16%**

of respondents have been concerned about having enough food to eat.

**93%** of respondents do not currently use tobacco products.

# Riley County Community Needs Assessment

## PHYSICAL HEALTH FINDINGS

The 2020 Riley County Community Needs Assessment, conducted by Wichita State University Center for Applied Research and Evaluation, included the compilation of selected secondary data, administration of a community survey (n=1,229), key informant interviews, and focus groups with persons who were underrepresented in the survey.

Secondary data show that Riley County residents are largely healthier than average for Kansas on many health indicators. Respondents to the survey tended to report themselves as being relatively healthy, with behaviors that are more in line with recommended standards regarding physical activity and nutrition than is evidenced in secondary data. Additionally, Riley County has a higher percentage of food insecure households than average for the state (17.5% versus 12.7%), and 42.5% have low access to grocery stores (19.8% have low income and low access).

### *Selected data from secondary sources*

Physical Health	Riley County	Kansas	Source
Percent of adults with fair or poor self-perceived health status, 2017	9.4%	17.0%	BRFSS
